During the last several months we had  
the opportunity to sea trial four boats  
with Yamaha outboard motors in the 200  
to 250 hp range. Two sets of these were  
on Grady-White 272 Sailfish, and  
another on a Pursuit 2855. This makes  
for a total of eight engines ranging in  
years from 1995 to 1999, which gave us  
a pretty good look at how these engines  
are performing over time.

I have a 2000 Yamaha 130hp outboard motor. When you give it throttle, it sounds like it hits a rev limiter at about 2500 RPM (tach doesn't work) I disconnect the temp sensors in the 2 heads, tested the oil level sensor, and changed the oil control unit. Is there anything else before I change the CDI unit.
