Reasoning, Algebra, and ...

In the given equation, the left side only has two terms, an x^2 -term and an x -term; a constant term needed to make the expression a perfect square trinomial. To calculate that constant, divide the coefficient of the x -term (which is -12) by 2 (giving -6) and square the result ($(-6)^2 = 36$).

(Yes, "5" is a polynomial, one term is allowed, and it can be just a constant!) These are not polynomials.

$3xy^{-2}$ is not, because the exponent is "-2" (exponents can only be 0,1,2,...);

$2/(x+2)$ is not, because dividing by a variable is not allowed $1/x$ is not

either; \sqrt{x} is not, because the exponent is " $1/2$ " (see fractional exponents); But these
