The iMac G5 is an all-in-one personal computer that was designed, manufactured and sold by Apple Computer, Inc. from August 2004 to March 2006. It is the final iMac to use a PowerPC processor, making it the last model that could natively run Mac OS 9 applications.It was replaced in January 2006 by the Intel-based iMac, which retained the features, price, and case design of the iMac G5.

iMac G5 - Wikipedia
The Macintosh (mainly Mac since 1998) is a family of personal computers designed, manufactured, and sold by Apple Inc. (originally as Apple Computer, Inc.) since January 1984.. The original Macintosh is the first successful mass-market all-in-one desktop personal computer to have featured a graphical user interface, built-in screen, and mouse. Apple sold the Macintosh alongside its popular ...

For an AMD APU that also needed to compete with Apple on GPU throughput there could be some upside to trading a larger Zen 5 core for a handful of 'N3 shrunk' 4c cores. (If the instruction set of Zen 5 basically overlaps 4c then won't have to turn off some features). AMD then could take that 'saved' space and allocate more GPU cores.

What do you guys think of the AMD Zen 4 Epyc 128 core cpu ...

High Sierra is out. Now it's time to install it on anything but a Mac. The first rig I got to run High Sierra is this cute and tiny silver build with an ASUS motherboard. High Sierra adds some pretty useful features like a log out button. The only downside I've noticed so far is that the screen waking can be a little slower then on Sierra.
