If A is a matrix of $m \times n$ and B is a matrix of $n \times p$ then their product matrix $C = (A \cdot B)$ will be $m \times p$, whose elements are produced by the dot product of a corresponding row of A and a corresponding column of B . The above image gives us a better understanding of multiplication of matrices. Applications of Matrices in Various Fields

problems.

What is the use of matrix in mechanical engineering? - Quora

In physics related applications, matrices are used in the study of electrical circuits, quantum mechanics and optics. Engineers use matrices to model physical systems and perform accurate calculations needed for complex mechanics to work.
