There are different kinds of internal combustion engines. Diesel engines are one type and gas turbine engines are another. Each has its own advantages and disadvantages. There is also the external combustion engine.The steam engine in old-fashioned trains and steam boats is the best example of an external combustion engine. The fuel (coal, wood, oil) in a steam engine burns outside the engine ...

### How Car Engines Work | HowStuffWorks

Oil muffles the engine, so when oil gets low the clatter from the engine becomes slightly louder. Eventually the "low pressure oil" oil light comes (hopefully). If the car is new, it will get hot rapidly because the fitting between the cylinders and bore is tight. If the engine is old, it may just keep puttering away because of a looser fit.
