Vascular Thrombectomy

Introduction. Olfactory dysfunction was recognized early in the COVID-19 pandemic (Eliezer et al., 2020; Lüers et al., 2020; Vaira et al., 2020b) and is a strong and consistent symptom associated with a positive COVID-19 test (Sudre et al., 2021). Well into the second year of the pandemic (Wang et al., 2020), there is no explanation in sight as to how SARS-CoV-2 mutes or alters the sense of ...

Visualizing in deceased COVID-19 patients how SARS-CoV-2 ...

The client's respiratory rate is only slightly elevated, so option 3, altered breathing pattern is not as important as airway. The client is cyanotic, but this probably is owing to the ineffective clearance of the sputum, causing poor gas exchange. The data in the question do not support low cardiac output as being most important at this time
