I've seen two different versions of problem 1.14 in the third edition of Jackson's Classical Electrodynamics. Has anyone else noticed this? My friend has two PDF copies of the book, each of which has a different problem 1.14. We chalked this up to the PDFs being illicit versions found on the internet.

Classical electromagnetism or classical electrodynamics is a branch of theoretical physics that studies the interactions between electric charges and currents using an extension of the classical Newtonian model. The theory provides a description of electromagnetic phenomena whenever the relevant length scales and field strengths are large enough that quantum mechanical effects are negligible.

Good Book. But "Classical Electrodynamics" by John David Jackson is my favourite. This book covered some basics very elaborately which Jackson didn't but Jackson clarified some matters better than Griffiths. So, both of the books combined is the best composition for learning and grasping the ideas of classical electrodynamics.

Descrizione. In particolare il paramagnetismo si osserva in quei materiali le cui molecole posseggono un momento di dipolo magnetico proprio, quindi si ha un effetto prevalentemente dovuto a polarizzazione magnetica per orientamento e trascurabile precessione di Larmor, come l'aria e l'alluminio. Nel caso dell'aria, l'effetto paramagnetico è a carico della molecola di ossigeno che possiede ...
