You can solve this issue and achieve the result by using projections by making your DTO an interface with getters for columns returned by the query. That's what I did when I faced the same issue. For example in your case change StatsDTO to interface like shown below, make sure to give alias for your columns if you are using '.' operator:.. public interface StatsDTO { Integer getUserCount ...

The Common Type System (CTS) standardizes the data types of all programming languages using .NET under the umbrella of .NET to a common data type for easy and smooth communication among these .NET languages.. CTS is designed as a singly rooted object hierarchy with System.Object as the base type from which all other types are derived. CTS supports two different kinds of types:
