Deer Population Lab Answers

Because squirrels are more dependent on acorns, this would be a growing issue and deer would eventually run the squirrel population out of that specific area of the forest. 10. If squirrels were to bury all of the acorns that fall in an area, this would have lasting effects on the population of the deer, thus causing the squirrel population to continue to grow and thrive in that area.

Carrying Capacity Mini-Lab - AP Environmental Science Labs

The deer population would've most likely stayed around 4,000 because the overgrazing had reduced the food source to support the deer. What major lessons were learned from the Kaibab deer experience? Taught land managers that there is a fine balance that must be managed between carrying capacity, food, source, climate, hunting and/or predators.

The Lesson Of The Kaibab Flashcards | Quizlet

Explain how an emigration of deer would impact the population in terms of numbers, limiting factors and carrying capacity. Lab Analysis Questions - Answer the following questions based on the datasheet shared in canvas "Ups and Downs of a Population Data".
