Fly Airbus In Manual Mode

Fly-by-wire (FBW) is a system that replaces the conventional manual flight controls of an aircraft with an electronic interface. The movements of flight controls are converted to electronic signals transmitted by wires, and flight control computers determine how to move the actuators at each control surface to provide the ordered response. It can use mechanical flight control backup systems ...

Study the aircraft controls. The necessary controls for flying this plane are: Throttle - a black knob - When pushed forward, the engine speed increases and when pulled back, the engine speed decreases. Full back is idle speed. Fuel mixture - a red knob - Pushed full inward is the richest mixture (used for sea level takeoffs and landings). Full back will shut the engine off.
