In mathematics and physics, Laplace's equation is a second-order partial differential equation named after Pierre-Simon Laplace who first studied its properties. This is often written as $\nabla^2 \phi = 0$, where ∇^2 is the Laplace operator, $\nabla \cdot$ is the divergence operator (also symbolized "div"), ∇ is the gradient operator (also symbolized "grad"), and ϕ is a twice-differentiable real-valued function.

Mathematical formulation. The Dirac equation in the form originally proposed by Dirac is: $(\hat{H} - E)\psi = 0$ where $\psi(x, t)$ is the wave function for the electron of rest mass m with spacetime coordinates x, t . The p_1, p_2, p_3 are the components of the momentum, understood to be the momentum operator in the Schrödinger equation. Also, c is the speed of light, and \hbar is the reduced Planck constant.

The Tau Manifesto is dedicated to one of the most important numbers in mathematics, perhaps the most important: the circle constant relating the circumference of a circle to its linear dimension. For millennia, the circle has been considered the most perfect of shapes, and the circle constant captures the geometry of the circle in a single number.
