Plants: Study Guide |
SparkNotes

The modern definition of plants includes organisms that live primarily on land (and sometimes in water), excluding algae that live primarily in water. Another distinguishing characteristic of plants is their type of chlorophyll. Chlorophyll is used to absorb energy from the sun during the process of photosynthesis.

Introduction to plants
Plants are an incredibly important kingdom of organisms. They are multicellular organisms with the amazing ability to make their own food from carbon dioxide in the atmosphere. They provide the foundation of many food webs and animal life would not exist if plants were not around.

When you think of plants, you probably think of plants like flowers that make seeds, but many plants don't. Remember that plants are divided into two main groups: nonvascular plants and vascular plants. All nonvascular plants are seedless, and some vascular plants are seedless, as well. What Are the Features of Nonvascular Plants?
