The Jet Engine and Sir Frank Whittle - Midland Air Museum

A jet engine is a type of reaction engine discharging a fast-moving jet that generates thrust by jet propulsion. While this broad definition can include rocket, water jet, and hybrid propulsion, the term jet engine typically refers to an internal combustion airbreathing jet engine such as a turbojet, turbofan, ramjet, or pulse jet. In general, jet engines are internal combustion engines.

Jet engine - Wikipedia

Frank Whittle, an English inventor and RAF officer, began development of a viable jet engine in 1928, and Hans von Ohain in Germany began work independently in the early 1930s. In August 1939 the turbojet powered Heinkel He 178 , the world's first jet aircraft, made its first flight.

Jet aircraft - Wikipedia

- The engine shown here is known as a “Whittle” type engine, since it follows the original design features developed by Sir Frank Whittle in the 1930’s. The first flight of a jet engine of his design was in 1941.
- All engines in use on today’s commercial jet airplanes have been developed based on this original design.

Propulsion (1): Jet Engine Basics

The turbine design was introduced in 1921, and it and the other basic components of the modern jet engine were present in a design for which a Royal Air Force lieutenant named Frank Whittle received an English patent in 1930. Although testing on Whittle's engine began in 1937, it did not fly successfully until 1941.
