GEOMETRY OF IMAGING. The positioning of the patient (geometry) to produce an image has a direct relationship to the quality of that image. The section on magnification (p. 162) outlined the ideal conditions needed to produce radiographic images and dealt with the requirements to reduce magnification ().It also emphasised that any increase in the size of the object also increases the ...

This is a basic article for medical students and other non-radiologists. CT abdomen is an increasingly common investigation that is used to help make diagnoses of a broad range of pathologies. A CT abdomen in its simplest form is a CT from diaphragm to symphysis pubis performed 60 seconds after pump-injection of iodinated contrast into a peripheral vein.
