Fuel is an open source project developed as an OpenStack community effort, and adheres to the same collaboration and development methods shared by OpenStack projects. The repositories live in Github and use the same Development workflow followed by all other OpenStack related projects.

Fuel - OpenStack

Using inventory directories and multiple inventory sources . If the location given to `-i` in Ansible is a directory (or as so configured in `ansible.cfg`), Ansible can use multiple inventory sources at the same time. When doing so, it is possible to mix both dynamic and statically managed inventory sources in the same ansible run.
