Python offers standard methods for calling REST web services -- stored process authors and maybe a SAS admin will need to help set that up. You can also use the SAS Workspace and PROC STP to run stored processes from SASPy, and save the output data from there (convert to pandas, whatever you need).

Introducing SASPy: Use Python code to access SAS - The SAS ...

Now this value of -2.574 tells us how aberrant the sample mean is from the null hypothesis. b. Two-sample T-test With Python. Such a test tells us whether two data samples have different means. Here, we take the null hypothesis that both groups have equal means. We don't need a known population parameter for this. Let's revise Recursion in ...
