A crystal radio receiver, also called a crystal set, is a simple radio receiver, popular in the early days of radio. It uses only the power of the received radio signal to produce sound, needing no external power. It is named for its most important component, a crystal detector, originally made from a piece of crystalline mineral such as galena. This component is now called a diode.

A radio-controlled aircraft (often called RC aircraft or RC plane) is a small flying machine that is controlled remotely by an operator on the ground using a hand-held radio transmitter. The transmitter communicates with a receiver within the craft that sends signals to servomechanisms (servos) which move the control surfaces based on the position of joysticks on the transmitter.

QSL Card Design - As suggested by Bob Locher, W9KNI, in his book "The Complete DX'er", it is advantageous to have your callsign on the same side of your QSL card as the QSO information. By doing so, the QSL Manager doesn't have to flip back and forth from one side of your QSL to the other as he/she verifies QSO information.
