At TeamViewer's site, they state they use multiple ways to identify if someone is connecting to more than just a few computers, which then triggers the "commercial use suspected" frustration. In versions 6 and early version of 7, they used the Hard Drive ID Number Windows assigns the drive at installation.

TeamViewer 'Commercial Use Suspected' fix | handshake systems

The TeamViewer IP Address Range is 178.77.120.0/24, which translates to 178.77.120.1 - 178.77.120.254. Step 4: Block TeamViewer Port. This step probably isn't necessary, but can be good as an extra layer of protection. TeamViewer connects on port 5938, but also tunnels via ports 80 (HTTP) & 443 (SSL) if that is unavailable.

How to: Block TeamViewer on your Network (Port & IP Address)

By default, when someone accesses your computer through TeamViewer, he or she gets full control of your PC. That is, with full access, one can connect and view your screen, control your computer, transfer files, establish a VPN connection to your computer, lock the local keyboard and mouse, control the local TeamViewer, file transfer using the file box, and view your screen via switching sides.
