After meeting the criteria for hospital release or lifting of quarantine, the patients were asked to remain at home for another 5 days. RT-PCR was performed again 5 to 13 days later and repeated three times over the next 4 or 5 days—and all tests were positive. Another RT-PCR test with a kit from a different manufacturer confirmed the results.

### Some COVID-19 patients test positive days after recovery ...

Two types of diagnostic tests are currently available in the US. PCR tests detect viral RNA. Antigen tests, also called rapid diagnostic tests, detect specific proteins on the surface of the coronavirus. Antigen test results may come back in as little as 15 to 45 minutes; you may wait several days or longer for PCR test results.
